

Bruker AXS

"We are very excited about acquiring the SMART X2S at the University of New Hampshire. As we do not have a traditional X-ray system at our disposal, this purchase represents a major step forward in terms of the type of data that we will now routinely collect. The instrument will be utilized by faculty, postdoctoral fellows, graduate students and undergraduates, none of whom would be considered specialists in X-ray crystallography. The SMART X2S pushes X-ray crystallography into the realm of standard structure determination tools that can be utilized on a daily basis, right alongside IR and NMR spectroscopy. In addition to acquiring structural details of organic and inorganic compounds, we will use the SMART X2S to gain valuable insights regarding intermolecular interactions that govern crystal packing and by extension, crystalline thin-film formation."

Professor Glen Miller, Professor of Organic Chemistry and Materials Science at the University of New Hampshire

SMART X2S

- The World's First Fully-automated Benchtop System for Chemical Crystallography
